

College of Engineering, Construction and Living Sciences  
Bachelor of Information Technology  
ID608001: Intermediate Application Development Concepts  
Level 6, Credits 15  
**Project**

## Assessment Overview

In this **individual** assessment, you will develop a three frontend applications. In addition, marks will be allocated for code quality and best practices, documentation and **Git** usage.

## Learning Outcomes

At the successful completion of this course, learners will be able to:

1. Apply design patterns and programming principles using software development best practices.
2. Design and implement full-stack applications using industry relevant programming languages.

## Assessments

Assessment	Weighting	Due Date	Learning Outcome
Practical	20%	13-11-2024 (Wednesday at 4.59 PM)	1
Project	80%	13-11-2024 (Wednesday at 4.59 PM)	1, 2

## Conditions of Assessment

You will complete this assessment during your learner-managed time. However, there will be time during class to discuss the requirements and your progress on this assessment. This assessment will need to be completed by **Friday, 21 June 2024 at 4.59 PM**.

## Pass Criteria

This assessment is criterion-referenced (CRA) with a cumulative pass mark of **50%** over all assessments in **ID608001: Intermediate Application Development Concepts**.

## Authenticity

All parts of your submitted assessment **must** be completely your work. Do your best to complete this assessment without using an **AI generative tool**. You need to demonstrate to the course lecturer that you can meet the learning outcome(s) for this assessment.

However, if you get stuck, you can use an **AI generative tool** to help you get unstuck, permitting you to acknowledge that you have used it. In the assessment's repository **README.md** file, please include what prompt(s) you provided to the **AI generative tool** and how you used the response(s) to help you with your work. It also applies to code snippets retrieved from **StackOverflow** and **GitHub**.

Failure to do this may result in a mark of **zero** for this assessment.

## Policy on Submissions, Extensions, Resubmissions and Resits

The school's process concerning submissions, extensions, resubmissions and resits complies with **Otago Polytechnic | Te Pūkenga** policies. Learners can view policies on the **Otago Polytechnic | Te Pūkenga** website located at <https://www.op.ac.nz/about-us/governance-and-management/policies>.

## Submission

You **must** submit all application files via **GitHub Classroom**. Here is the URL to the repository you will use for your submission – <https://classroom.github.com/a/eGYqq7-g>. If you do not have not one, create a **.gitignore** and add the ignored files in this resource - <https://raw.githubusercontent.com/github/gitignore/main/Node.gitignore>. Create a branch called **project**. The latest application files in the **project** branch will be used to mark against the **Functionality** criterion. Please test before you submit. Partial marks **will not** be given for incomplete functionality. Late submissions will incur a **10% penalty per day**, rolling over at **5:00 PM**.

## Extensions

Familiarise yourself with the assessment due date. Extensions will **only** be granted if you are unable to complete the assessment by the due date because of **unforeseen circumstances outside your control**. The length of the extension granted will depend on the circumstances and **must** be negotiated with the course lecturer before the assessment due date. A medical certificate or support letter may be needed. Extensions will not be granted for poor time management or pressure of other assessments.

## Resits

Resits and reassessments **are not** applicable in **ID608001: Intermediate Application Development Concepts**.

## Instructions

### Functionality - Learning Outcomes 1 and 2 (60%)

**Milestone One - Due Wednesday, 11 September 2024 (Week 8) at 4.59 PM. Code defence on Thursday, 12 September 2024 (Week 8) at 10.00 AM.**

- **Movie Listings Application (10%):**

- Create a new directory called **movie-listings-application** and create a new **React** application using **Vite**.
- Can run in development without modification.
- Use **React Query** and the **Fetch API** to fetch data from the **The Movie DB API**.

- Navigation bar using **Tailwind CSS** and **Shadcn UI** with the following movie type options:
  - \* Trending. This is the default option.
  - \* Top Rated
  - \* Action
  - \* Animation
  - \* Comedy
- Note:** You will use **React Router** to navigate between the options.
- The endpoints for the movie types are as follows:
  - \* Trending - [https://api.themoviedb.org/3/trending/all/week?api\\_key=<API KEY>&language=en-US](https://api.themoviedb.org/3/trending/all/week?api_key=<API KEY>&language=en-US)
  - \* Top Rated - [https://api.themoviedb.org/3/movie/top\\_rated?api\\_key=<API KEY>&language=en-US](https://api.themoviedb.org/3/movie/top_rated?api_key=<API KEY>&language=en-US)
  - \* Action - [https://api.themoviedb.org/3/discover/movie?api\\_key=<API KEY>&with\\_genres=28](https://api.themoviedb.org/3/discover/movie?api_key=<API KEY>&with_genres=28)
  - \* Animation - [https://api.themoviedb.org/3/discover/movie?api\\_key=<API KEY>&with\\_genres=16](https://api.themoviedb.org/3/discover/movie?api_key=<API KEY>&with_genres=16)
  - \* Comedy - [https://api.themoviedb.org/3/discover/movie?api\\_key=<API KEY>&with\\_genres=35](https://api.themoviedb.org/3/discover/movie?api_key=<API KEY>&with_genres=35)
- Note:** Replace <API KEY> with your **The Movie DB API** key. More information can be found at: <https://developer.themoviedb.org/docs/getting-started>.
- When an option is selected, display the title, overview, poster path and release date of the first 10 movies.
  - \* Style each story to look like a card using **Tailwind CSS** and **Shadcn UI**.
  - \* Display five stories per row.

## Milestone Two - Due Wednesday, 16 October 2024 (Week 11) at 4.59 PM. Code defence on Thursday, 17 October 2024 (Week 11) at 10.00 AM.

### • Hacker News Application (20%):

- Create a new directory called **hacker-news-application** and create a new **React** application using **Vite**.
- Can run in development without modification.
- Use **React Query** and **GraphQL** to fetch data from the **Hacker News API**.
- Navigation bar using **Tailwind CSS** and **Shadcn UI** with the following story options:
  - \* Ask Stories. This is the default option.
  - \* Best Stories
  - \* Job Stories
  - \* New Stories
  - \* Show Stories
  - \* Top Stories
- Note:** You will use **React Router** to navigate between the options.
- The endpoints for the stories are as follows:
  - \* Ask Stories - <https://hacker-news.firebaseio.com/v0/askstories.json?print=pretty>
  - \* Best Stories - <https://hacker-news.firebaseio.com/v0/beststories.json?print=pretty>
  - \* Job Stories - <https://hacker-news.firebaseio.com/v0/jobstories.json?print=pretty>
  - \* New Stories - <https://hacker-news.firebaseio.com/v0/newstories.json?print=pretty>
  - \* Show Stories - <https://hacker-news.firebaseio.com/v0/showstories.json?print=pretty>
  - \* Top Stories - <https://hacker-news.firebaseio.com/v0/topstories.json?print=pretty>
- When an option is selected, display the title of the first 25 stories.
  - \* Style each story to look like a card using **Tailwind CSS** and **Shadcn UI**.
  - \* Display five stories per row.
- When a story is clicked, the user will be navigate to a page that displays the following information:
  - \* By
  - \* Kids. **Note:** This is an array of ids. If the array is empty, display **N/A**. Display the first five ids as URLs in this format: <https://hacker-news.firebaseio.com/v0/item/<Id>.json?print=pretty>. When clicked, these URLs will open in a new tab.

- \* Score
- \* Time. **Note:** Convert the time to a readable format.
- \* Title
- \* Type
- \* URL. **Note:** When clicked, this URL will open in a new tab.

This information is fetched from the following endpoint:

<https://hacker-news.firebaseio.com/v0/item/<Id>.json?print=pretty>.

- On a page, display the top 15 leaders. You can get this information from the following URL:  
<https://news.ycombinator.com/leaders>. **Note:** You need to manually retrieve the information from the URL.
- When a leader is clicked, the user will be navigate to a page that displays the following information:
  - \* About
  - \* Created. **Note:** Convert the time to a readable format.
  - \* Id
  - \* Karma
  - \* Submitted. **Note:** This is an array of ids. Display the first 5 ids as URLs in this format:  
<https://hacker-news.firebaseio.com/v0/item/<Id>.json?print=pretty>.

This information is fetched from the following endpoint:

<https://hacker-news.firebaseio.com/v0/user/<Id>.json?print=pretty>.

### Milestone Three - Due Wednesday, 18 November 2024 (Week 15) at 4.59 PM. Code defence on Thursday, 19 November 2024 (Week 15) at 10.00 AM.

#### • Trivia Application (20%):

- Create a new directory called **trivia-application** and create a new **React** application using **Vite**.
- Can run in development without modification.
- Use **React Query** and **GraphQL** to fetch data from the **OpenTDB API**.
- Create a form with the following inputs:
  - \* Amount. This is the number of questions to retrieve. The default value is 10.
  - \* Category. This is a dropdown list. The options can be retrieved from the following endpoint:  
[https://opentdb.com/api\\_category.php](https://opentdb.com/api_category.php). The default option is **Any Category**.
  - \* Difficulty. This is a dropdown list with the following options:
    - Any Difficulty. This is the default option.
    - Easy.
    - Medium
    - Hard
  - \* Type. This is a dropdown list with the following options:
    - Any Type. This is the default option.
    - Multiple Choice
    - True/False
- When the form is submitted, perform a request to the [https://opentdb.com/api\\_config.php](https://opentdb.com/api_config.php).
- Use the response to display the questions and answers in a quiz format.
- Create a form that allows the user to submit their answers. After the user submits their answers, display their score and the correct answers.

### Code Quality and Best Practices - Learning Outcome 1 (45%)

- A **Node.js .gitignore** file is used.
- Environment variables' key is stored in the **.env.example** file.
- Appropriate naming of files, variables, functions and components.

- Idiomatic use of **TypeScript**, control flow, data structures and in-built functions.
- Efficient algorithmic approach.
- Sufficient modularity.
- Each file has a **JSDoc** header comment located at the top of the file.
- Code is formatted.
- No dead or unused code.

### Documentation and Git Usage - Learning Outcomes 1 (5%)

- A **GitHub** project board or issues to help you organise and prioritise your development work. The course lecturer needs to see consistent use of the **GitHub** project board or issues for the duration of the assessment.
- Provide the following in your repository **README.md** file:
  - How do you setup the environments, i.e., after the repository is cloned?
  - How do you run your **frontend applications** locally?
  - How do you check your code?
  - How do you format your code?
- Use of **Markdown**, i.e., headings, bold text, code blocks, etc.
- Correct spelling and grammar.
- Your **Git commit messages** should:
  - Reflect the context of each functional requirement change.
  - Be formatted using an appropriate naming convention style.

### Additional Information

- **Do not** rewrite your **Git** history. It is important that the course lecturer can see how you worked on your assessment over time.
- You need to show the course lecturer the initial **GitHub** project board or issues before you start your development work. Following this, you need to show the course lecturer your **GitHub** project board or issues at the end of each week.
